

CSE445 Assignment 3 – Services and TryIt Page

Student Name: Pranjal Satyam Chhaya

1.1 Application Description

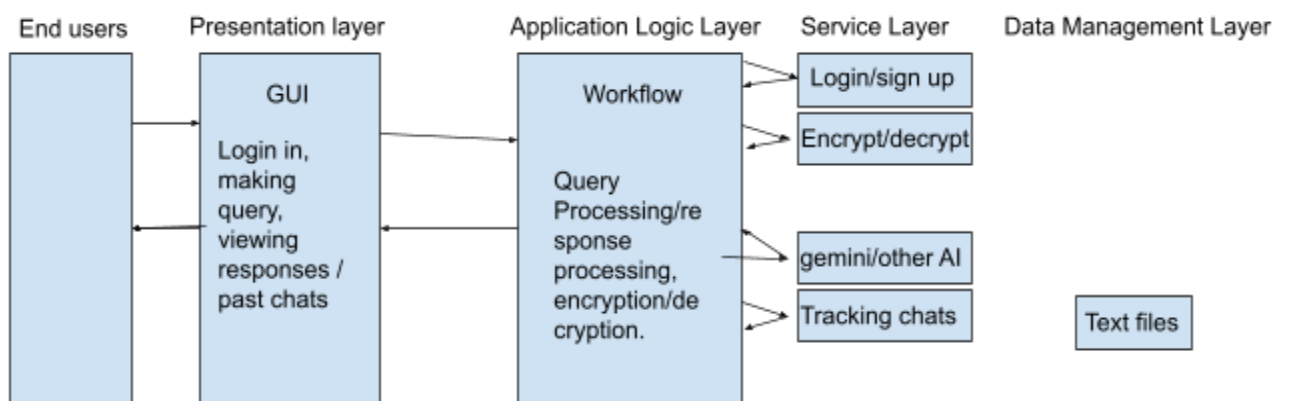

This project introduces the foundation for an AI-powered Argument Resolver, a web-based system designed to help users resolve conflicts in a respectful and constructive manner. The user enters a description of a real-world argument or interpersonal conflict, and the system responds with an AI-generated suggestion to help de-escalate or resolve the issue.

In the final version of the application, users will be able to:

- Log in securely to track their previous interactions.
- Encrypt sensitive input/output using Caesar cipher to protect privacy.

The current system showcases service design and interaction through the TryIt web interface and lays the groundwork for AI-assisted emotional support and conversational systems.

1.2 System Design Diagram

1.3 Service Directory

This project is developed by: **Pranjal Satyam Chhaya**

Service Name	TryIt Link	Description	Resources Used
WebDownload(string url)	https://localhost:44318/WebDownloadTryIt.aspx	Downloads raw HTML content from a provided URL	.NET WebClient.DownloadString()
Top10ContentWords(string url)	https://localhost:44318/Top10TryIt.aspx	Extracts top 10 frequent non-stop words from a webpage	WebClient, Regex, stopwords list
Encrypt(string input, int shift)	https://localhost:44318/EncryptTryIt.aspx	Caesar cipher to encrypt and decrypt text messages	Custom logic with character shifting
CheckStrength(string password)	https://localhost:44318/PasswordStrengthTryIt.aspx	Evaluates password strength and gives suggestions	Character analysis and scoring

ResolveArgument(string argument)	https://localhost:44318/ArgumentTryIt.aspx	Provides AI-generated conflict resolution using Gemini 1.5 Flash	Google Gemini API via HTTP POST
